

DreamPunk 3.4.2.0 Installer

Overview: Automated installer for DreamPunk 3.4.2.0 (requires Cyberpunk 2077 v2.31). Handles installation, updates, and selective uninstallation.

Installation Process

- 1. Game Detection:** Automatically locates Cyberpunk 2077 in Steam, GOG, or Epic Games Store. Manual selection available as fallback.
- 2. Version Check:** Validates game version (requires v2.31). Warns on mismatch to prevent crashes.
- 3. Mode Selection:** Choose between Install (with configuration) or Uninstall (selective removal).

Configuration Options (Install Mode)

Graphics Configuration

- **NVIDIA Standard:** Default quality
- **NVIDIA Ultra:** Enhanced quality, less ghosting, dynamic shaders (high performance cost)
- **AMD Standard:** Default quality
- **AMD Ultra:** Enhanced with dynamic shaders

Preset Selection

- **SDR Ultimate:** Photorealistic (default)
- **SDR Bodycam:** Bodycam-style visuals
- **HDR Ultimate:** For HDR monitors (requires HDR10 PQ enabled in-game)

Saturation Options (SDR Ultimate only): Vibrant, Neutral (default), or Desaturated

Optional Crash Fix: Resets corrupt user settings that may cause startup issues

Uninstallation Options

Selective component removal:

- **DreamPunk Core** (mandatory) - Removes all DreamPunk files
- **ReShade** - Removes all shaders, textures, and config files
- **Red4ext** - Removes entire red4ext folder including all plugins
- **Codeware** - Removes only Codeware plugin from red4ext folder

Components Installed

Game configuration files, mod archives, ReShade DLL & shaders, Red4ext plugins, NGD Bridge plugin, Mod Menu addon

⚠ Important Notes:

- **GOG Users:** Disable GOG Galaxy Overlay to prevent crashes
- **HDR Users:** Enable HDR10 PQ in-game, set Maximum Brightness to monitor's max nits, Tone-Mapping Midpoint to 1.5, Paper White to 400-500
- **Mod Organizer Users:** Use manual installation instead
- Installer warns if conflicting mods are detected
